The desire for an ideal body has forever been a universal theme in all cultures. Thanks to the introduction of non-invasive, pain free body sculpting technologies, many people can now reach their desired look after a short period of time. Using highly innovative methods, RF and IR energies melt away cellulite and effectively destroy fat cells. The results are dramatic, giving you the shape and beautiful body you have always wanted.
**Frequently asked questions**

**About Body Contouring Treatment**

**Q:** What does body contouring entail?
**A:** This procedure uses Radio Frequency waves (RF) to produce heat under the skin; this heat effectively targets and breaks down fat cells. The fat is absorbed by the lymphatic system and flushed out. The Infrared (IR) waves are used to tighten the skin. As a side effect of the treatment, the process rejuvenates the surrounding skin and renews collagen fibers, resulting in elastic, youthful and shining skin.

**Q:** How many treatments are required?
**A:** Around 8-10 weekly sessions are recommended for best results, along with suggested periodic Maintenance.

**Q:** How long do treatments take?
**A:** Both body contouring and skin tightening sessions take around 20-30 minutes, after which you can immediately return to your regular activities.

**Q:** How long does it take until results are visible?
**A:** While immediate improvement is visible in most cases even after the very first treatment, dramatic results are apparent after 6 to 8 treatments.

**Q:** What kind of results can I expect?
**A:** Although results vary from person to person, a typical body contouring treatment can decrease body measurements by 3 to 6 centimeters.

**“The beauty of the treatment is that it can achieve very visible fat reduction and body contouring without invasive or surgical procedures.”** - Confino Counstantin M.D.

**About RF and IR Treatment**

**Q:** What are RF and IR?
**A:** Radio frequency (RF) and infrared light (IR) use different types of energy to heat the different skin layers and provide a controlled tissue response.

**Q:** How does RF treatment work?
**A:** RF body contouring uses the body’s electrical conductivity to transmit energy, which works to rupture localized fat cells by raising the temperature of the tissue in designated skin layers.

**Q:** How does IR light-based technology work?
**A:** Light based technology creates heat that contracts collagen and tightens the skin, without damaging surrounding tissue.

**Q:** Are RF and IR treatments safe?
**A:** All Radio Frequency and Infrared treatments are non-invasive and safe, with minimal side effects.

**Q:** Are RF and IR treatments painful?
**A:** While a slight tingling may be felt as the temperature of the tissue heats up, absolutely no pain will be felt.

For a slimmer, shapely body you have always dreamt of

- Reduces cellulite and localized fat deposits
- Shows dramatic results after a short period of time
- Highly effective
- Non-invasive, safe and reliable
- Immediate return to full activity
